DETAILED ACTION

Allowable Subject Matter

1. **Claims 2-12, 14-18, and 20-30** are allowed.
2. The following is an examiner's statement of reasons for allowance: (please also see previous office action mailed on 11/02/2007)

Lemistre et al. (Simulation of an Electromagnetic Health Monitoring Concept for Composite Materials. Comparison with Experimental Data) discloses a new concept of Structural Health Monitoring System for composite materials, using electromagnetic properties of the material; which based on the detection of local electric conductivity variations and/or local dielectric permittivity variations, has allowed to design a demonstrator having a great sensitivity to detect main defects such as delaminations, fiber breaking, burning and liquid ingress with remedy of disadvantage, such as allowing to perform quantitative measurement of electric conductivity and dielectric permittivity, with the performance of a numerical simulation [see Lemistre et al.: *Abstract; 1-Introduction; 3- Application to Structural Health Monitoring Domain; 4.1-Basic Principle; and sections 5.1-5.3*].

Regarding **claim 2**, the combination as claimed including "in which said structural element is an inhomogeneous structural element comprising an imperfectly

conducting material, of electrical conductivity, in which the means of emission is means of emission of magnetic radiation that is suitable for generating a magnetic field, the magnetic field being, at the area, equivalent to a magnetic field emitted by a magnetic dipole extending in the direction, and in which the calculation means is furthermore suitable for obtaining a value of the electrical conductivity in the area on the basis of the first measured component" is not anticipated, disclosed, suggested, or rendered obvious by the prior art of record.

Claims 3-12 depend from allowed claim 2 and therefore are also allowed.

Regarding **claim 14**, the combination as claimed including "in which the structural element is an inhomogeneous structural element comprising an imperfectly conducting material, of electrical conductivity, in which the means of emission comprises means of emission of magnetic radiation that is suitable for generating a magnetic field, the magnetic field being, at the area, equivalent to a magnetic field emitted by a magnetic dipole extending in the direction, and in which the calculation means is alternatively suitable for obtaining a value of the electrical conductivity in the area on the basis of the first measured component" is not anticipated, disclosed, suggested, or rendered obvious by the prior art of record.

Claims 15-18 depend from allowed claim 14 and therefore are also allowed.

Regarding **claim 20**, the combination as claimed including "generating a magnetic field by means of emission of magnetic radiation while generating the electromagnetic field, the magnetic field being, at the area, equivalent to a magnetic field emitted by a magnetic dipole extending in the direction, and in which said structural element is an inhomogeneous structural element comprising an imperfectly conducting material, of electrical conductivity" is not anticipated, disclosed, suggested, or rendered obvious by the prior art of record.

Claims 21-30 depend from allowed claim 20 and therefore are also allowed.

Conclusion

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
